

LUC's Environmental Policy

LUC's Environmental Management System (EMS) was originally registered in March 2011 (BSI Registration Number EMS 566057). It was transitioned to the revised 14001: 2015 standard and most recently audited in June 2018.

We regard the EMS as an appropriate expression of the company's commitment to continuous improvement, in terms of its own environmental performance and as a contribution to the wider sustainability agenda.

LUC is committed to not only meeting its compliance obligations (whether legally-derived or client-derived), including a commitment to avoid pollution, but is also committed to the following objectives in line with our LUC Strategy:

- To reduce carbon footprint as part of our proactive programme of facilities management, with the medium-term goal of achieving consistent, year-on-year carbon reductions per capita, and with the long-term goal of carbon neutrality
- To reduce business travel through teleconferencing where possible, favouring and promoting the use of public transport and continuing to encourage and facilitate sustainable travel among employees
- To continue to focus on resource efficiency, including water and waste minimization in the workplace. This is to be achieved by promoting water-efficient practices and ensuring that as far as possible, office waste is recycled and by maintaining the long-term goal of zero direct waste-to-landfill
- To ensure that office supplies and services are procured from environmentally and socially-sustainable sources
- To assess and demonstrate the contribution that we make to environmentally-sustainable design and planning using tools such as our bespoke Sustainability Checklist
- To ensure that all staff clearly understand the context of LUC's EMS and their role in delivering the excellent environmental performance that LUC strives for
- To communicate this statement to clients and contractors via our website
